

EF13 Series Meter

DESCRIPTION

These series of running time meters feature a six-digit readout with no reset capabilities, making them virtually tamper proof. The EG series, a basic timer without housing or bezel, is designed for mounting behind a panel while the EF series is provided with its own bezel. The EF13 has a round bezel while the EF27 has a square bezel. The EG series and the EF13 units are provided with an indicator to show the unit is operating. The synchronous motor provides accuracy equal to that of the power line frequency.

APPLICATION

The EF and EG elapsed time indicators are basic units designed for use in normal environments. They are applied anywhere there is a need to accumulate running time on AC powered equipment. Typical applications include: manufacturing machinery, HVAC equipment, pumps, compressors, and generators.

OPERATION

There are no operator controls associated with these timers. When power is applied, time is accumulated on the digital readout.
